

AI Usage Disclosure

Project: ITAI 1371 Final Project

This project benefited from AI assistance during code generation and editorial support. The AI (GitHub Copilot-like assistance) was used to suggest implementation ideas, structure documentation, and format output.

Human involvement was central:

- All AI-provided code and text were reviewed by the student.
- Logical decisions, correctness checks, and debugging were performed manually.
- Every change was understood before being committed to the project.

The AI tool served as an aid, not as a substitute for the student's own work and learning.
